

Regulatory Sidekick

A stepwise MDR/IVDR and ISO 13485 implementation — so the team building the device **understands and owns** its quality system instead of renting it back.

DOCUMENT	RS-1PG-01
REVISION	0.1 — DRAFT
SHEET	1 OF 1

§1

THE PROBLEM — WHY FIRST DEVICES STALL

The Medical Device Regulation is public. The **order of operations** is not. A first-time team with no QA/RA hire faces hundreds of interlocking obligations, every guide insisting its own comes first, and “enough” never defined.

The blocking question is never “what does the standard say?” — that text is free. It is “what do I do first?”

§2

WHAT IT IS — THREE JOBS, IN THE ORDER PEOPLE PAY FOR THEM

I — THE MOAT

Sequencing

116 activities in a defensible order, real dependencies encoded. Templates are everywhere; **a defensible order is not**.

II — THE SUBSTANCE

Artefacts

275 controlled-document templates — procedures, forms, registers — clause-mapped and traced to the step that produces each.

III — THE PROOF

Traceability

A clause-level matrix across 14 standards plus a per-activity evidence trail — what an auditor actually reads.

§3

WHAT IS IN IT — COUNTED FROM THE SHIPPED CONTENT, NOT ESTIMATED

Sequenced activities	116	Controlled documents	275
Deep sub-activities	338	Mapped QMS processes	39
Granular checklist tasks	682	Standards, clause-level	14

ISO 13485 · EU MDR · EU IVDR · ISO 14971 · IEC 62304 · IEC 62366-1 · IEC 81001-5-1 · IEC/TR 80002-2 · AAMI TIR57 · MDCG guidance · ISO 27001 · EU AI Act · GDPR · FDA QMSR

§4

HOW IT RUNS — FOUR PHASES, SCOPED TO YOUR DEVICE

PHASE I

Set the foundations

PHASE II

Develop under control

PHASE III

Verify, validate & make

PHASE IV

Certify, launch & operate

First we make the plan smaller: a device profile filters everything by regulatory route and 11 device characteristics, so you never open a page that does not apply. **Then we make step one small:** every activity has a version you can start this week.

§5

WHO IT IS FOR — AND WHAT IT COSTS

LICENCE	PRICE	WHO IT IS FOR
Explore	Free	Full roadmap, matrix and library index; one sample activity open in full
Practitioner	€1,800 · or €600×3	Startups and solo QA/RA — under €1M revenue, 10 or fewer staff, up to 3 users
Standard	€6,000 · or €2,000×3	Companies and teams rolling out their own QMS
Consultancy / fund	€3,000–15,000 / yr	Multi-client delivery rights, or a medtech-fund portfolio block

One-time purchase, perpetual access — a lapsed licence stops updates, never your documents. Prices exclude VAT.

§6

WHY IT IS DIFFERENT

- **Not an eQMS.** Those sell the container and leave it empty — which makes them partners, not competitors.
- **Not a consultancy.** We sell the knowledge once, not the hours of applying it — so the incentive to keep it mysterious never appears.
- **Traceability enforced, not asserted.** The build fails if a document has no producing process step. Checked by CI on every deploy.
- **Machine-workable.** An admin-approved, audited API lets an AI agent work the same ordered plan — it drafts, but never signs off.
